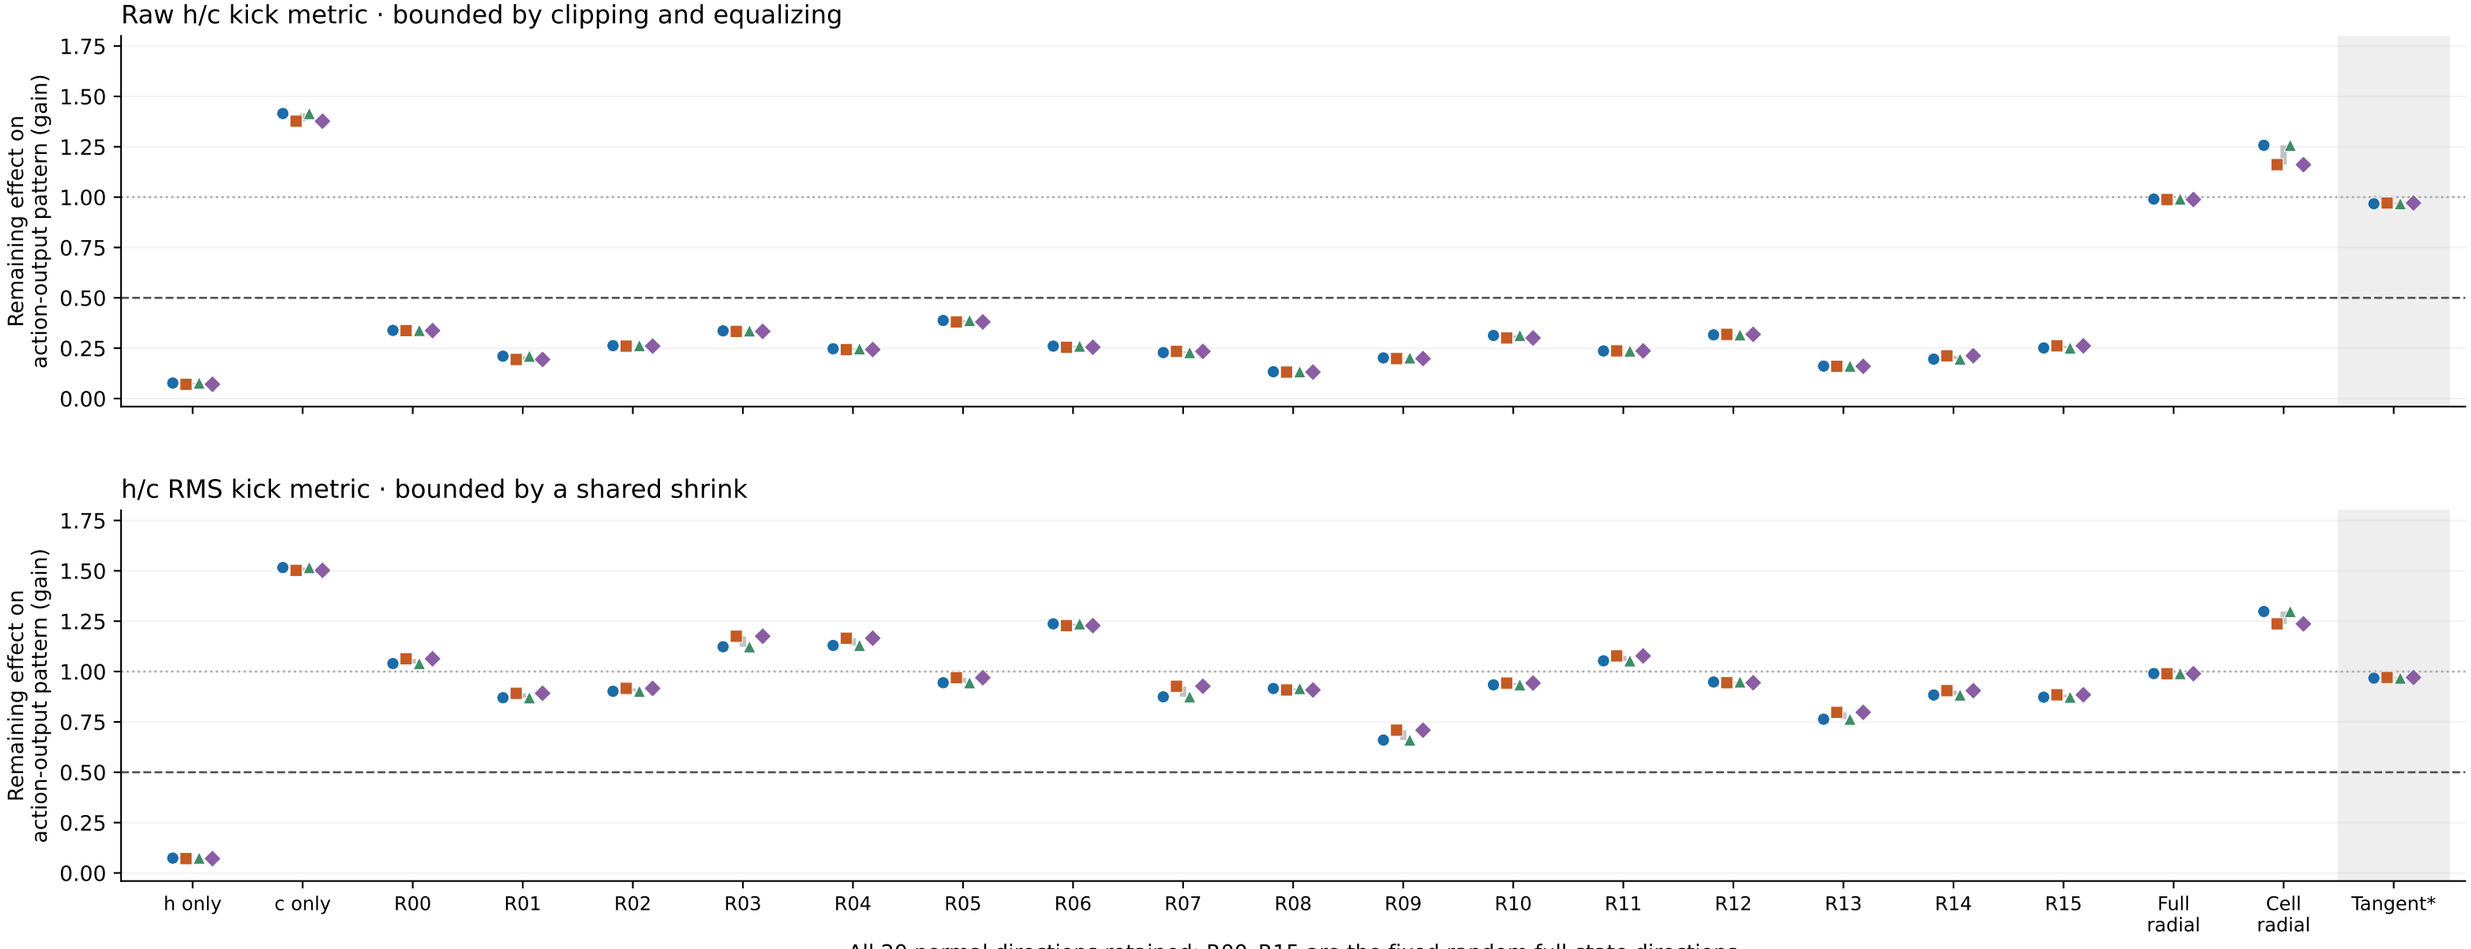
Action-output effects of hidden-only kicks shrink; cell-sensitive errors persist

One original PGC network · one context (8) · native probe after pre-cue reset · two prefixes × two periodic sections

LEFT prefix · B section · LEFT prefix · F section · RIGHT prefix · B section · RIGHT prefix · F section · Normal-gain criterion ≤ 0.5



All 20 normal directions retained; R00–R15 are the fixed random full-state directions

Dots: medians over 8 anchors × 2 signs; grey spans: range of the four case medians (not confidence intervals).
Normal gain: remaining off-curve actor-score error after 2 updates. *Tangent: total actor-output displacement gain, a distinct reference.
Three-update observation window; centered curve shape; 1,024 actual headings. Raw/RMS labels describe physical kick construction.
